

Instructions for Use for SpaCare SunWac 12

Applies to the following item number: 502

SpaCare SunWac 12 tablets are Scandinavia's best-selling spa product. With SunWac 12, you get clean and fragrant water in your spa. The product contains added organic Egyptian mint extract, which gives the water a lovely relaxing scent, while the chlorine content in the tablet ensures that you bathe in clean water. The tablets are developed in Denmark and are suitable for all types of water in Scandinavia.

Usage:

Before bathing: Add 1-2 SunWac 12 tablets per 1000-1500 liters of bathwater, preferably add them to the dirt separator when the water circulation is running. Set the water massage (8 water jets) to the lowest speed. You can bathe as soon as the tablets have dissolved (about 5 minutes).

After bathing: Add 1 SunWac 12 tablet per 1000-1500 liters of bathwater to disinfect the water after use. After about 20 minutes, you can bathe again without adding new tablets.

IMPORTANT: It is very important for water hygiene to follow the rule "after bathing." Regularly check and adjust the chlorine level, pH value, and alkalinity to the following values:

- **Chlorine level: 1.0-3.0 mg/L**
- **pH: 7.0-7.4**
- **Alkalinity: 80-120 mg/L**

If the spa is used frequently, the water should be changed regularly and the pool cleaned. In private spas, the built-in pipe system should be cleaned 3-4 times a year with SpaCare Biofilm Cleaner.

Tip! Visit www.spacare.se if you have issues with the water in your pool.

IMPORTANT: Shower thoroughly before bathing! A person who has not showered contaminates the water in the spa 200 times more than a freshly showered person.
