

Instructions for Use for SpaCare SunWac 9

Applies to the following item number: 501

SpaCare SunWac 9 Tablets – Scandinavia's Best-Selling Spa Product

With SunWac 9, you get clean and fresh-smelling water in your spa. The product contains an added organic Egyptian mint extract that gives the water a delightful, relaxing fragrance while the chlorine content in the tablet ensures you bathe in clean water. The tablets are developed in Denmark and are suitable for all types of water in Scandinavia.

Usage:

Before bathing: Add 1–2 **SunWac 9** tablets per 500–1,000 liters of spa water. Preferably add them into the skimmer while the water circulation is running. The water massage (water jets) should be set to the lowest speed. You can bathe as soon as the tablets have dissolved (approximately 5 minutes).

After bathing: Add 1 **SunWac 9** tablet per 500–1,000 liters of spa water to disinfect the water after use. After approximately 20 minutes, you can bathe again without adding more tablets.

NOTE! It is very important for water hygiene to follow the "After Bath" rule. Regularly check and adjust the chlorine level, pH level, and alkalinity to the following values:

- **Chlorine level: 1.0–3.0 mg/L**
- **pH level: 7.0–7.4**
- **Alkalinity: 80–120 mg/L**

If the spa is used frequently, the water should be changed regularly, and the basin should be cleaned. In private spas, the built-in pipe system should be cleaned 3–4 times a year using **SpaCare Biofilm Cleaner**.

Tips! Visit www.spacare.se if you experience any problems with the water in your spa.

IMPORTANT: Shower thoroughly before bathing! A person who has not showered contaminates the spa water 200 times more than a freshly showered person.
